## TWO-STEPS SHRINK

expert  
line

### Features

The Expert Line is our newest and most innovative semi-automatic "L" sealer system to date. We've taken the two-step concept and added a pneumatic piston and put all the components onto a single frame. The pneumatic feature allows the operator to feed the product while the sealing bar goes up and down as programmed (i.e., every 2 sec., 3 sec., etc.). We include a foot pedal that will activate the sealing bar if the programmable timer is not used. Either way the operator will have his hands free to feed the machine. The speed of the shrink tunnel conveyor is adjustable and the temperature is electronically controlled.

option

extended rollers conveyor

expert 5040 pn

### technical specifications

power supply	220 V/3 PH – 20 AMPS
air consumption	1 CFM @ 80 psi
sealing dimensions	15.75"W 19.5"L
sealing system	impulse microknife
tunnel entrance dim.	17.5"W 9.5"H
packaging speed	up to 25 packs/min.
maximum centerfold film	24"
working plate height	36"
overall machine dimensions (W x L x H)	98.5" x 31.5" x 59"
shipping weight	660 lbs.
